SUMMARY

Frontend Developer skilled in React, Next.js, and responsive design, with experience building scalable web apps and integrating AI APIs. With roots in the Arts Stream, I've carved my own path into the digital world, blending creativity with clean, responsive code.

Whether it's building sleek interfaces or solving tricky design challenges, I thrive on bringing ideas to life in the browser.

Let's build something amazing together!

WORK EXPERIENCE

Frontend Developer | Handyease (Virtual) | Sep 2024 – Aug 2025

- Implemented reusable UI components in Next.js and Tailwind, reducing development time by 25%.
- Integrated WebSockets for real-time updates, improving user engagement and reducing latency by 40%.
- Created 50% of platform UI with Tailwind, ensuring responsive design across devices.
- Collaborated with designers and backend engineers to deliver cross-browser compatible interfaces.

Dev Lead | Uzence (Virtual) | Sep 2025 – Present

- Improved code quality and team productivity by mentoring developers, conducting code reviews, and enforcing best practices
- Led development of an enterprise-level Design System using React and Storybook, delivering reusable and scalable UI components
- Implemented WCAG 2.1 AA accessibility standards (keyboard navigation, ARIA, focus management, color contrast)

Work as a Freelancer Frontend developer with Automify.in

- Built a full-stack job application platform using Next.js, enabling users to apply for overseas jobs through Taiba Overseas
- Developed a cross-platform mobile application using Capacitor, ensuring seamless deployment on Android and web
- Implemented real-time features using WebSockets for chats, live updates, improving user engagement and responsiveness

SKILLS

Frontend : React, Next.js, Redux, Tailwind, Bootstrap, Responsive Design

Backend : Node.js, Express.js, REST API, WebSockets

Languages : JavaScript, TypeScript, C

Tools : Git, GitHub

Databases : Mongo db, MySql

AI : CursorAI, ChatGPT, AntigravityAI

PROJECTS

1-Self Ai Interview Project

- Built and deployed an AI-driven self-interview platform using Next.js, TypeScript, and Gemini API, enabling users to practice technical and behavioral interview questions.
- Engineered full-stack logic for dynamic question flows, real-time feedback, and smooth state management to improve user experience.
- Optimized architecture for component reusability, efficient API integration, and performance handling (async data, API throttling).

2-Portfolio

- Built a personal portfolio website as my first React project, showcasing projects and skills.
- Transitioned from vanilla JavaScript to React, gaining hands-on experience with components and state management.
- Deployed portfolio online to demonstrate technical skills and professional growth.

3 - Gym Management & Discovery Platform | React Native, Expo, TypeScript, Supabase

- Built a cross-platform Gym Management & Discovery application using React Native, Expo, TypeScript, and Supabase, supporting Android, iOS, and Web from a single codebase.
- Developed a multi-tenant role-based system enabling gym owners to manage memberships, attendance, payments, and gym operations while members discover and join gyms.
- Implemented secure authentication with Phone OTP, Email OTP/Password, and Google OAuth using Supabase Auth and protected route management.
- Designed and integrated a QR-based attendance system, allowing members to check in via QR scanning and providing owners with real-time attendance analytics and reports.
